International application No.
PCT/FR2004/001896

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

- (5) provided with an adjustment stop (15,
- 16) causes the translation of the part supporting said vessel (10).

It follows that the subject matter of claim 1 differs from this known device in that:

- said translation is restricted by both the abutment and a reinforcement that is positioned on the external top surface of said vessel-supporting part.
- 3. As a result, the subject matter of claim 1 is novel (PCT Article 33(2)).

The problem that the present invention is intended to solve can therefore be considered to be that of preventing said device from being accidentally dismantled.

- 4. The solution to this problem, as proposed in claim 1 of the present application, is considered to involve an inventive step (PCT Article 33(3)) because none of the cited documents describes or suggests the use of a reinforcement positioned on the external top surface of the vessel-supporting part in order to solve the stated problem.
- 5. Claims 2-12 are dependent on claim 1 and, as such, therefore also fulfil the PCT requirements of novelty and inventive step.
